

secRMM

Security Removable Media Manager

secRMM Benefits Healthcare

HIPAA Security Rule requires covered healthcare entities who transmit information electronically to implement policies and procedures to prevent, detect, contain, and correct security breaches. **secRMM** is a security software solution which ensures compliance with the HIPAA Security Rule by managing and collecting data about removable storage activities.

The introduction of removable storage devices, if left unmanaged, can lead to the complete loss of control and ultimately a breach. A data breach can subject an entity to financial liability (failing to adhere to HIPAA Security Rule) and/or damage to reputation. secRMM allows for the management of growing workforce expectations around the mobility of data

without simply relying on internal written policies and/or an honor system.

Satisfy the following HIPAA Rules:

- Review records of information system activity such as audit logs, access reports, and incident tracking reports
- Reduce risks & vulnerabilities to a reasonable & appropriate level
- Assess risks and vulnerabilities to the confidentiality, integrity and availability of ePHI held by entity
- Implement procedures over workforce members who work with ePHI or in locations where it might be accessed
- Implement procedures for terminating access to ePHI
- Identify security incidents and mitigate effects
- Implement software mechanisms that record & examine activity in information systems that contain or use ePHI
