Security Removable Media Manager

Enhance Your Organization's Security with secRMM and Apricorn

No longer do organizations have to rely on company policies and procedures to limit the use of the USB port. Now with secRMM and Apricorn they can actively manage, secure, and audit USB port activity internally.

secRMM's simple authorization policy rules allows organizations to control who, what, where, when, and how data is copied from their network to Apricorn devices. In addition, secRMM's detailed monitoring provides organizations advanced forensic analysis to combat unlawful and/or unauthorized disclosure of sensitive information.

Apricorn's suite of hardware encrypted drives and Squadra Technologies' secRMM work in unison to provide the highest level of security and management!

Manage Your Security

- Know when an Apricorn device has mounted
- Allow the copying of files **only** to Apricorn devices (whitelisting)
- Log all file copies made to Apricorn devices
- Capture and log the exact files being copied
- Audit the complete source file path (local drives & network shares)
- Log all failed attempts to copy files to any removable storage device.
