
secRMM

Security Removable Media Manager

secRMM Benefits Finance

It is within the very nature of financial institutions to keep large internal networks of personal and sensitive information. Employee mismanagement of this information through copying it to unauthorized removable storage not only could cause legal liability, but also a potential loss of "good-will" and future business. secRMM allows organizations to evaluate and adjust their removable storage information security program to their specific security needs.

secRMM Satisfies Required Security Guidelines by:

- Monitoring systems & procedures to detect actual & attempted attacks on or intrusions into customer information
- Detection of unauthorized individuals gaining access to customer information systems
- Access controls on customer information systems, including controls to authenticate & permit access only to authorized individuals
- Intrusion detection system to alert of possible attacks on computer systems that store customer information
- Rapid & accurate determination of possible intrusion of private information.
