

secRMM

Benefits and Advantages

secRMM Benefits - Law Firms

Technology has provided many benefits to law practices from streamlining client communication to rapid document review. However, it is important to remember that attorneys are responsible for the management and security of client's property, including documents kept digitally. The regularity of cyber theft causing massive loss of client/customer data only highlights the need to take proactive measures to reduce the risk of a breach.

Often breaches occur through employee's use of removable storage, including thumb drives and smart phones. secRMM addresses and mitigates these security holes by controlling and monitoring file copy activity.

It is within law practices scope of legal and ethical responsibility to understand the potential risks involved with utilizing new technologies. The ability to copy many files quickly and efficiently cannot be overstated. However, without the correct security measures in place, such as deploying secRMM, a law practice may be subjecting itself to potential liability due to data theft.

Software Solution to Control and Secure Removable Storage

Removable storage devices provide convenience and efficiency. Unfortunately, these devices can be a real threat, leaving companies susceptible to data theft. Squadra Technologies', secRMM, provides organizations the perfect tool to securely manage data assets while permitting productivity with the use of these devices.

secRMM's simple authorization policy rules allow organizations to control the who, what, where, when, and how of data copied from their network to removable storage devices. In addition, secRMM's detailed monitoring provides organizations advanced forensic analysis to combat unlawful and/or unauthorized disclosure of sensitive information.

Secure the Advantages

- ▶ Detailed auditing/monitoring of removable storage device activity
- ▶ Auditing includes complete source file path (local drives & network shares)
- ▶ Monitors all storage devices including Mobile (smart phones/tablets), USB thumb drives, encrypted drives, CD/DVD, external hard drives & SD cards
- ▶ Logs failed & successful file copy operations providing the who, what, where, when & how
- ▶ Simple deployment: no additional framework required
- ▶ Microsoft Integration: central management, monitoring, & reporting using Microsoft System Center and/or Active Directory
